DETAILED ACTION

1. This Office Action is responsive to the Application filed on 05/01/06.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE ABSTRACT:

-The Abstract, (filed on 05/01/06), is replaced as following:

--The invention relates to electrical network communications engineering and can be used in systems for automatic data collection from intrusion protection and fire alarm sensors, electric, heat, water, gas meters and fiscal memory data devices for cash registers. The technical result is significant reduction of power consumption in transmitters of system slave units and/or expansion of its operation. A unique random or pseudo-random set of initial phase differences for the adjacent harmonic pairs is used to encode each character of transmitted data, and these sets of initial phase differences are selected in such a way as to minimize crest factor of a total signal. When a fire-alarm sensor is actuated, it is sufficient to transmit only one symbol to an alarm panel which, unambiguously identifies the location of the active sensor and as a rule is embodied in the form of a conventional number or address pre-allocated to the sensor.--

IN THE CLAIMS:

Art Unit: 2611

-On page 6 of the application (filed on 05/01/06), the last paragraph, at the bottom of the page under the heading "CLAIM", is replaced as following:

--What is claimed is:

1. A method of geometric harmonic modulation of a signal comprising a plurality of harmonics evenly spaced in frequencies, whereto a unique random or pseudo-random set of initial phase differences for the nearest pairs of said harmonics is used encode each character of transmitted data and said sets of initial phase differences are selected in such a way as to minimize the crest factor of total signal.--

3. The applicant is herein notified that: (i) The above amendment to the Abstract (filed on 05/01/06) is needed because the current Abstract is more than 150 words; the Abstract is incompleted (see the last sentence); and word "means" should be avoided in the Abstract (see the last sentence); and (ii) The above amendment to the Claim (filed on 05/01/06) is needed because the claim has not yet been numbered.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuong Phu whose telephone number is 571-272-3009. The examiner can normally be reached on M-F (8:00 AM - 4:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chieh Fan can be reached on 571-272-3042. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
